**Weather Discussion**  
 Afternoon update: Well, the models didn't really show this wedge of drier air, and still have some activity this afternoon and evening, but I'm having doubts about that looking at the radar!! The last forecast for the season, and all the weather is front end loaded! The low pressure that has been near the California Coast has picked up anchor and is moving east-northeast and the model data is very generous with the precipitation. The dynamics are decent, unstable air mass (ie: chance of thunderstorms) and the air mass cools enough for some snow down into the Snyderville Basin! A quiet weather day tomorrow, then the cold front approaches on Wednesday bringing a chance of showers. That's a wrap on an awesome season, thank you for allowing me to be a part of your day for the last 6 months. I hope everyone has a great summer and I'll see you in the fall!
